THE SUPPOSED TAUTOMERISM OF SULFUROUS
ACID (PRELIMINARY NOTE). [1963] 13p 8refs
Order from SLA \$1.60 TT-64-10501

Trans. of Gazzetta Chimica Italiana, 1962, v. 92,
no. 11, p. 1189-1197. (Abstract available)

DESCRIPTORS: *Sulfur compounds, Dioxides, Inorganic
acids, Sulfites, *Molecular isomerism,
*Chemical bonds.

Taking under examination the old question of the structure of alkaline sulfites, already amply discussed fifty years ago, and taking into account new facts not considered at that time (electronic theory of valency, recent advances of organic chemistry with regard to tautomerism), the author comes to the conclusion that the "tautomerism" presumed for free sulfurous acid cannot by any means be considered as proven. DESCRIPTORS: "Diesel engines, Pistons, Rods, Vibra-
tion, Tests.

The waviness of surface on components operating under
condition of dry, semi-liquid and liquid friction brings
about a great wearing of the pairs. The supporting
power of a cylindrical bearing is diminished in the
presence of a wavy surface. The supporting power
(load-carrying capacity) of a plane-parallel step bearing
is increased in the presence of waviness. There is an
optimal ratio of spacing to the height of undulation
